BACKGROUND

- Approximately 9 in 10 youth use the Internet.
- Benefits associated with Internet use:
 - Increased social support
 - Access to sensitive health information
- Risks associated with Internet use:
 - Internet harassment ("cyberbullying")
 - Unwanted sexual solicitation

2006 American Psychological Association

YISS 2 METHODS & SAMPLE CHARACTERISTICS

- Methods:
 - Telephone survey of a national sample of young Internet users (ages 10-17) and one caregiver
 - Care taken to preserve youth privacy and confidentiality
 - Interviews took place from March to June 2005
- Demographic characteristics:
 - 51% female
 - 76% White, 9% Hispanic ethnicity
 - 40% annual household income \$75,000 or more
 - 22% lived with an adult with a postgraduate education

2006 American Psychological Association

DEFINITION OF INTERNET HARSSMENT

Feeling worried or threatened because someone was bothering or harassing youth online

Someone used the Internet to threaten or embarrass the youth by posting or sending messages about the youth for other people to see.

5

EXAMPLES OF INTERNET HARASSMENT

"I got a instant message from some girl from school and she was telling me that she wanted to beat the living crap out of me and talking badly about me at school in front of my friends."

"They just kept telling me that they wanted to see me and they thought that I was cute. They kept telling me information that described me and was true about me and I didn't know where they were getting that information from."

"He basically threatened to come and beat me up and hurt my family and my friend...he did some things to my friend that really hurt and i was talking to him about it and he spazzed out."

9

DISTRESSING HARASSMENT EXPERIENCES

- Harasser is an adult (AOR=4.1)
- Harasser asked youth to send picture (AOR=3)
- Aggressive offline contact by harasser (AOR=3.9)
- Preadolescent (10-12 years) (AOR=5.5)
- Youth uses chat rooms (AOR=0.3)

○ 2006 American Psychological Association

10

DISCUSSION: Reasons to be positive

- Majority of young Internet users not harassed and of those who are, the majority are not upset by it.
- Most harassment incidents are disclosed.

○ 2006 American Psychological Association

11

DISCUSSION: Reasons for ongoing vigilance

- 50% increase in reports of online harassment over the past 5 years (6% to 9%).
- Can be serious event (chronic, aggressive offline contact, adult involvement).
- About 2 in 5 are distressed

○ 2006 American Psychological Association

12

DISCUSSION

- Similarities and differences from traditional bullying.
 - Age and sex differences
 - Power differential
- Findings suggest directions for Internet safety.
 - Adults should partner with youth, don't punish youth
 - Acknowledge different types of harassment experiences call for different preventive behaviors
 - Professionals should be mindful of circumstances surrounding online harassment to aid in early identification and provide support.

○ 2006 American Psychological Association

13

LIMITATIONS

- Cross-sectional data
- Data reflect youth's most distressing event – cannot evaluation across multiple incidents and harassers
- Low response rate (45%), although national telephone surveys still provide representative samples of Americans.
